Title: System, Method, And Computer Program Product For Configuring And Purchasing A Medical Device

Examiner: Dilek B. Cobanoglu

Amendment(s) to the Claims

The following listing of claims replaces all prior versions and listings of claims in the present application:

Listing of Claims:

Claim 1 (previously presented): A system for configuring a medical device, comprising: a digital repository populated with entries defining a plurality of medical device components, each entry associated with an individual medical device component and having a component identification indicator, a component class indicator, and at least one patient attribute indicator; a processor; and a computer readable medium encoded with processor readable instructions that when executed by the processor implement a practitioner user interface mechanism configured to provide a practitioner with access to entries in the digital repository via a network and to allow the practitioner to provide at least one patient interview answer indicator, a patient interview mechanism configured to receive over the network the at least one patient interview answer indicator corresponding to an attribute of a patient and to store the at least one patient interview answer indicator in a memory, and
